

when they are secured for us by previous generations—we are in danger of forgetting to remain vigilant against those very threats to our liberty. Often, when blessed with peace, memories fade. Sometimes forgotten are those who sacrifice to fight against the tyranny of oppression.

In Odessa, TX, the Desert Squadron of the Confederate Air Force takes to the air in the surviving military aircraft that helped win the peace in World War II. They fly in honor of those who piloted those aircraft, and in honor of those who were supported by the mighty American air cover. The fact that these aging aircraft can fly at all is at the heart of the mission and the message of the Confederate Air Force Desert Squadron: preparedness and vigilance.

For our military veterans, our men and women in uniform today, and the generations who will be entrusted to keep our country strong, keeping these aircraft flying becomes a lesson in history and a means of teaching strength, preparedness, and vigilance in the name of liberty.

IN HONOR OF EL NUEVO HUDSON:  
CELEBRATING 2 YEARS OF  
SERVICE TO HUDSON COUNTY'S  
HISPANIC COMMUNITY

### HON. ROBERT MENENDEZ

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1997

Mr. MENENDEZ. Mr. Speaker, I rise today to pay tribute to the El Nuevo Hudson edition of the Jersey Journal, a local Spanish language publication in my district, on its second anniversary of outstanding service to Hudson County's Hispanic community. This newspaper and its distinguished publisher, Mr. Scott Ring, will be honored during a scholarship fund benefit dinner on March 26, 1997, at Jersey City State College in Jersey City, NJ.

In the early 1960's, large numbers of Hispanic immigrants began moving into the north Hudson area. Few sources of daily news were available in the native language of these new and valued members of the area. Today, Spanish news organizations, magazines, and publications such as El Nuevo Hudson have become the backbone of the Hispanic community, addressing important informational needs and concerns as well as deepening the understanding among Hispanic-Americans from various parts of the world.

In a relatively short time frame, El Nuevo Hudson has established itself as a social, cultural, and political watchdog for the growing Hispanic-American population in Hudson County. Ethnically focused newspapers such as El Nuevo Hudson have helped minority communities flourish in this Nation.

Since its launching, El Nuevo Hudson has proven to be a reliable and valuable medium to Hispanics throughout Hudson County. By keeping people in touch with news and services that affect them, it has contributed to the heightened awareness of the diverse Hispanic community. For this reason alone, I commend the publisher, editor-in-chief Armando Bermudez, and the talented and hard-working staff for providing a much needed service. I encourage them to maintain their exceptional work for many years to come.

I ask that my colleagues join me today in recognizing the El Nuevo Hudson edition of the Jersey Journal, a publication that provides a new voice for the Hispanic community. Through the journalistic expertise of its publisher, Scott Ring, it has won acclaim throughout the news gathering sector of our area. I look forward to the continued participation of El Nuevo Hudson as New Jersey approaches a new century.

### THE INTRODUCTION OF THE CENSUS ACCURACY ACT OF 1997

### HON. CAROLYN B. MALONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1997

Mrs. MALONEY of New York. Mr. Speaker, I rise to introduce the Census Accuracy Act of 1997. The Census Accuracy Act requires that 3 years prior to the census, the Census Bureau must submit to Congress its plans for carrying out the census. It must report what methods will be used to take the census, including direct counting methods, sampling, statistical techniques, and any other methods to ensure that the census is as accurate as possible. The Census Accuracy Act also specifies that when Congress requires the allocation of funds based on population or housing characteristics, unless otherwise specified, that data should be collected on the census at the same time as the information for apportionment is collected.

Some critics of the Census Bureau's current plans for the 2000 census argue that title 13, U.F.C., prohibits the use of sampling to derive the population counts used for apportionment. In fact, the record is clear and overwhelming that just the opposite is true. The Department of Justice under Presidents Carter, Bush, and Clinton has concluded that the use of sampling is both legal and constitutional. Similarly, when asked to rule, the courts have consistently upheld the use of sampling. Nevertheless, some observers continue to question whether section 195 of title 13, U.F.C., permits the use of sampling to derive the population counts used for apportionment, even when read in conjunction with section 141 of the same title. Therefore, the purpose of this bill is to reaffirm the interpretation of the courts and the Justice Department that the use of sampling is both appropriate and desirable in order to make the census more accurate, and ensure that sections 195 and 141 of title 13, U.F.C., are in harmony as originally intended.

In just 3 years, the 2000 census will be under way. That census is important to this body because it will determine how the seats of this House are apportioned among the States. That census is important because over the decade it will be used to allocate hundreds of billions of dollars to State and local governments. It will be used to enforce the Voting Rights Act to assure equal representation. It will be used by businesses to locate manufacturing plants where there is an adequate work force, and to provide services that are valued by the communities of which they are a part. It will be used by State governments to plan highways, and by local governments to assure adequate sewer and water facilities. We cannot afford an inaccurate census. The bill I am introducing today will assure all of us that the

next census is as fair and accurate as possible.

Our understanding of the accuracy of the census increases each decade. Both Thomas Jefferson, the first census taker, and George Washington knew there were errors in the 1790 census. But it took until 1940 for census demographers to start measuring that error with sound scientific tools. Between 1940 and 1980 the net undercount decreased from 5.4 to 1.2 percent, but the differential undercount, the difference between black and nonblack undercount, went from 3.4 percent in 1940 to 4.3 percent in 1970 to 3.7 percent in 1980. In 1990, both the total net undercount and the differential went up. In fact, the differential of 4.4 percent between blacks and nonblacks in 1990 was the largest ever. In addition to increasing error in 1990, the cost per household, in constant dollars, went up. The 1990 cost was 25 percent higher than 1980 and 150 percent higher than 1970.

Because of the errors in the 1990 census, California was denied a congressional seat that was rightfully theirs. The 1990 census missed over 10 million Americans. Six million were counted more than once. It is not fair that those 10 million Americans were left out of the census, and it is not fair that those 6 million were counted twice. We would not stand for those kinds of errors in our election results, and we should not tolerate them in the census.

Is there anything that can be done about it? Absolutely. The Census Bureau has proposed a variety of changes in the 2000 census that will produce a more accurate census at a lower cost. The Census Bureau will make a greater effort to count everyone than ever before, and people will have more opportunities to respond than ever before.

Before the census form is mailed, everyone will receive a letter telling them that the census is coming. Then each household in the United States will receive a form. About a week later, they will receive a letter thanking them for returning the form, and reminding them to mail it if they have not. About a week after the reminder letter, the Census Bureau will send out a second form so that those who misplaced it will have a replacement.

In addition to the mail, the Census Bureau will use a variety of methods to make it easier for the public to be counted. Forms will be placed in super markets and community centers, post offices and government buildings, convenient stores and retail stores. Forms will be available in foreign languages, and there will be a toll-free number where people can call for help. There will also be a toll-free number where people can fill out their form over the phone. And, if privacy concerns can be addressed, it may be possible to return your form through the internet. There will be an advertising campaign to inform the public that the census is coming, and to explain why the Government is collecting this information. There will be programs for schools and civic organizations, as well as census employees whose job it is to work with community organizations to get out the count.

Even with all of these efforts we know that not everyone will send back their form. For every 1 percent of the population that does not mail in their form, or respond over the phone, it costs an additional \$25 million to count them. The best estimate of the experts is that even with all of these efforts, nearly 35
